Pear Mr Snow.

I want to comment about the draft EIR for the Cal/Fed Bay Delta Program. Add this to the formal report. I do not want any more dams built. Water conservation is the way to go. Increase water efficiency & manage the ground water, find ways to support better agricultural water resources & conserve water while preventing its pollution. We need fresh water for the fish and to keep the bay productive. Keep rivers running clean & Think Water Conservation. We can save 50% of ag water with drip irrigation. No more dams. Better water management means we can meet California's needs.
